

SCSC Named Finalist in 2011 EE Times ACE Award for Energy Technology

Stony Brook, New York – March 17, 2011 – SCSC was selected as a finalist in the Energy Technology category for the 2011 EE Times Annual Creativity in Electronics (ACE) Awards. The ACE Awards celebrate the creators of technology who demonstrate leadership and innovation in the global industry and shape the world we live in.

Now entering the seventh year of the program, the EE Times ACE Awards is the leading electronics industry recognition event honoring the people and companies behind the technologies that are changing the way we work, live and play. The EE Times states, "*When you are selected as one of five finalists in a category - or you are a recipient of an EE Times ACE Award - you will have a prestigious accolade from the editors of EE Times underscoring the innovation and leadership of your company throughout your marketing programs and media outreach.*"

ENERGY TECHNOLOGY AWARD - A significant portion of the electronics industry has begun the historic shift from information to energy technology. This trend will help sustain and expand several industry sectors. The EE Times Energy Technology Award recognizes those companies that have made the most significant contribution to this shift through the introduction of new concepts and products that help conserve energy or create new energy sources.

SCSC is proud to have been selected as a finalist for this prestigious award.
